

Use-Case Flow Specification

Use Case: Generate Mock Endpoints

Primary Actor: API Developer

Preconditions

1. The OpenAPI Mock Server Generator is running.
2. The API Developer has an OpenAPI 3.0 YAML or JSON file.

Postconditions

1. Mock API endpoints are generated successfully.
2. The generated endpoints are ready for testing.

Main Success Scenario

1. The API Developer opens the OpenAPI Mock Server Generator.
2. The developer uploads an OpenAPI YAML or JSON specification file.
3. The system checks the file format and validates the specification.
4. The system reads the API paths and schema definitions.
5. The system generates mock REST API endpoints.
6. The system creates schema-based mock JSON responses.
7. The system starts the mock server.
8. The system displays the generated endpoints.
9. The API Developer can use the endpoints for testing.
10. The use case ends successfully.

Alternate Flow: Invalid Specification File

3a. The uploaded file is invalid or not supported.

1. The system detects an error in the file.
2. The system does not generate the mock endpoints.
3. The system displays a clear error message.
4. The API Developer corrects the file and uploads it again.
