

OpenAPI Mock Server Generator — UML Component Diagram (Layered Architecture)

Legend

Key data flows

A Generate endpoints (UC-01 / UC-02): API Developer → Web UI —ISpecUpload→ Spec Parser & Validator —IEndpointGeneration→ Mock Endpoint Generator —IRouteRegistration→ Mock Server Engine; spec and endpoint model persisted through ISpecStore (Spec & Config Repository).

B Test mock API (UC-05 / UC-03 / UC-06): QA Engineer —IMockHTTP→ Mock Server Engine —IRequestValidation→ Request Validator; delay via IDelayLookup; response (mock JSON or clear error) returned to client; each request recorded through ILogRecording.

C Configure latency / export logs (UC-04, FR-005): Web UI —ILatencyConfig→ Latency Controller; Web UI —ILogExport→ Request Logger & Exporter (CSV).
